Advances in Real-Time Situational Awareness for Border Surveillance and other Perimeter Security Applications

Craig Jeffries – CEO, Jemez Technology

www.jemeztechnology.com

Growing Need to Enhance Critical Infrastructure Security

Rail / Transportation

Energy / Substations /
Power Distribution

Airport Perimeter &
Ground Operations

Pipelines / Oil & Gas

Border Security /
Virtual Fencing

Mission Critical
Facilities

Real-Time Situational Awareness is a Force Multiplier

Prevention vs. After-the-Fact

- Real-time detection
- Real-time tracking
- Real-time responder notification

Actionable Intelligence

- Provide guards and security teams with actionable information

Precision Response

- Improve assessment and response capability
- Visual communications to first responders

Real-Time Situational Awareness Enables Prevention and Lowers Risk

New Video Surveillance Software Solutions

“Turn ALL Cameras into Highly Accurate Smart Sensors”

- Detect, alert, and prevent security threats
- Highly accurate detection to >5 miles in range
- Ultra-precise, automated PTZ tracking
- Simple, fast software setup and VMS/PSIM integration

Fixed FOV Color or Thermal IR Camera(s)

Auto-Controlled PTZ Camera

Key Components for a COTS Perimeter Surveillance System

Fixed Thermal or Color IP Camera

Any Analog or IP Camera

Edge-Based Video Appliance

Used as a Security Sensor vs. Human

Edge-Based Analytics Software

Single or Multi-Camera Detection and Tracking Software

Turns Cameras into “Smart Sensors”

Pan-Tilt-Zoom (PTZ) Camera

Automatically Controlled by Analytics Software for Long-Range ID & Tracking

Used for Target Identification and Tracking

“Internet of Things” Real-Time Alerts

Audio Devices

VMS/PSIM/
GPS/Mapping

I/O
Modules

Mobile
Devices

First Responder Event Notification

Plug-and-Play System Integration with Existing Security Infrastructure

Intelligent Analytics Enhance Performance of Existing Surveillance

Continuous Monitoring with Wide-Area Detection of Suspicious Activity

Sophisticated video analytics with scene synthesis can now reliably detect perimeter intrusions, moving vehicles, and people over wide areas and long-ranges, beyond human capability, in virtually all operating conditions.

Autonomous Zoom PTZ Camera Captures and Tracks Activity

Simultaneous Zoom Imaging w/Analytics for Capture and Tracking

Automatic Pan-Tilt-Zoom (PTZ)

Autonomous PTZ automatically points to the exact location without the use of camera presets, and maintains continuous wide-area field-of-view surveillance during zoom process.

Real-Time Actionable Intelligence is Automatically Sent to First Responders

Real-Time Notification to Dispatch Center or First Responders

Real-time alerts with precise visual threat information are automatically sent to dispatch centers and specified mobile devices. Alerts can also be archived with remote viewing capability.

Applications for Cameras

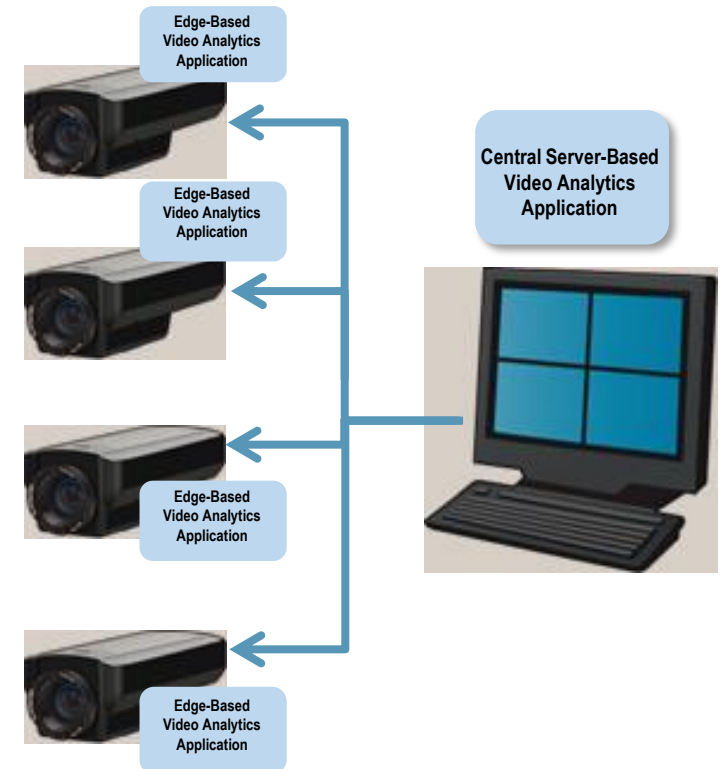

Advantages of Intelligence “at the Edge”

Video analytics “at-the-edge”

- Software runs as an “app” in the camera (breakthrough); no servers
- Processing significant portions of video within camera and encoder
- Streaming event metadata and only required video to first responders and central station
- Built on open standards

Overcome limitations of centralized systems and intelligence

- Reduce bandwidth and storage consumption
- Reduce system cost and complexity
- Design truly scalable deployments
- Simplify deployment and ease-of-integration

Benefits of Open Standards

Main benefits

Interoperability
Freedom of choice

Future-proof
More secure investments

Cost-effectiveness
Less integration cost

Examples of standards
